

LEADBEATER'S POSSUM CONSERVATION

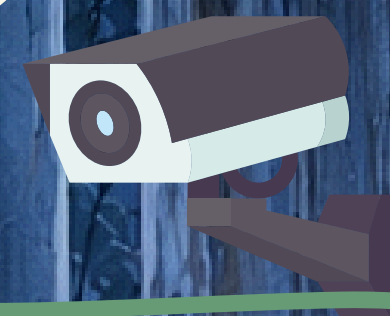

PROTECT

Nest boxes are being tested in areas where there are not enough old hollow-bearing trees. This could provide extra places to build nests.

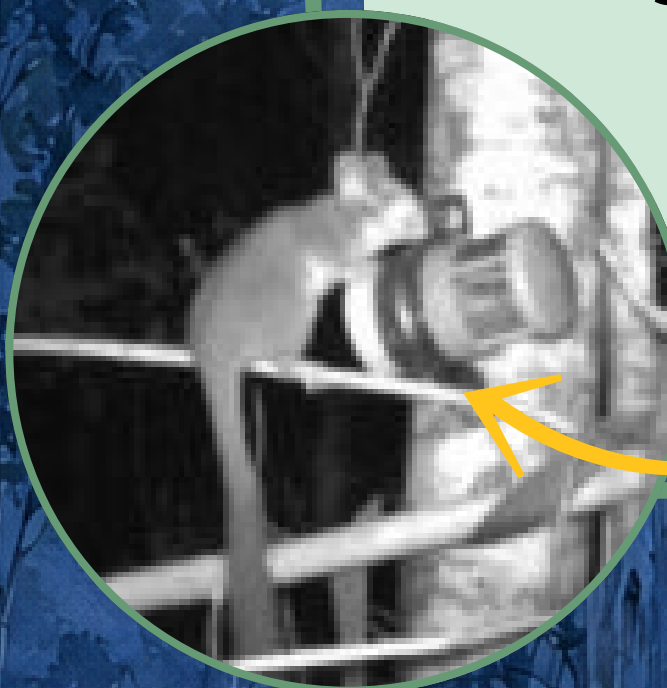

MONITOR

Motion sensing cameras are used to find out if possums are living in an area of forest.

Creamed honey is used as a lure to attract the possums to the camera.

PROTECT

Two joeys were born in 2022.
The first in 20 years!

Zoos Victoria manages a **captive breeding** program at Healesville Sanctuary

THREATS

Loss of hollow-bearing trees due to bushfire, logging and agriculture.

Feral deer destroy the forest understory.

Feral cats and foxes are predators.

PROTECT

Controlling the populations of **feral foxes, feral cats, and feral deer** to keep possums and their habitat safe.
